

Are you a doctor, nurse, physiotherapist, occupational therapist, psychologist, speech and language therapist or other **healthcare professional** looking after people who have had a **traumatic brain injury**?

## What is the purpose of the research ?

Researchers at the University of Nottingham Hearing Sciences have launched a survey aiming to learn more about the auditory and balance status of this group of patients through the opinions and experiences of healthcare professionals.

## How can you help?

Take our survey to share your views and experiences of working with this patient group.

Although we appreciate the interest of ENT specialists and audiologists, we are eager to learn about the opinions and experiences of healthcare professionals who **do not specialise in hearing and balance**.

**We love ENT specialists and audiologists!**

University of  
**Nottingham**
